

MOHAMMED SINAN M P

FLUTTER DEVELOPER

thesinanmhd@gmail.com | +91 9895638580 | [LinkedIn](#) | [GitHub](#)

PROFILE SUMMARY

Flutter Developer with a solid foundation in mobile application development and a strong focus on building scalable, maintainable, and high-performance applications. Experienced in developing responsive user interfaces, integrating backend services, and implementing efficient application architecture. Skilled at writing clean, well-structured code and solving complex technical problems. Committed to continuous learning and delivering reliable mobile solutions in collaborative and fast-paced development environments.

TECHNICAL SKILLS

Programming Languages : Dart

Framework : Flutter

State Management : BLoC, RiverPod

Databases : Firebase Firestore, Hive (Local Storage), MongoDB (Basic)

Tools & Platforms : Git , GitHub, Visual Studio Code, Postman, Figma, GitHub Actions

API & Integration : REST API, Dio, JSON Parsing, Webhooks, Socket.IO (Basic), Cloudinary (Basic), Ngrok (Basic)

Familiar with : Python, HTML, CSS, n8n, Unity Engine

Other Skills : Problem Solving , Self-Motivated Learner , Analytical Thinking , Adaptability
Curiosity for Learning New Technologies

PROJECTS

ControlX – Remote Laptop Control System

[GitHub](#)

ControlX is a Flutter-based mobile application that enables **remote control of a laptop through a local network connection**. It communicates with a **Node.js backend** running on the target device to execute system-level commands and stream real-time system information. The application uses **Firebase**

Authentication for secure authentication and is structured using **Clean Architecture** with **BLoC** for maintainability and scalability.

- Engineered a modular Flutter application using **Clean Architecture** and **BLoC** for scalable state management
- Implemented secure user authentication with **Firebase Authentication**
- Developed a **Node.js-based local server** to handle **command execution** and **system interactions**
- Designed **RESTful APIs** and integrated them using **Dio** for efficient communication
- Implemented real-time bidirectional communication using **WebSockets** (Socket.io)
- Built features to remotely trigger system operations such as application launching and system control
- Established secure device **pairing** and reliable connection handling over **LAN**

HabitBot – Habit Tracker with Automated Reminders [GitHub](#)

Built a Flutter-based habit tracking application integrated with **Firebase** for **authentication** and **data storage**. Implemented **automated reminder workflows using n8n**, where user actions trigger **webhooks** to schedule and **send notifications via external messaging APIs**. The project demonstrates experience in mobile development, API integration, and event-driven automation using tools like **Dio** and **ngrok**, with robust **exception handling and error management** to ensure application **stability** and **reliability**.

Pulse – Real-Time News & Crypto App [GitHub](#)

Built a real-time Flutter application that delivers live news updates and cryptocurrency data with a strong focus on performance, reliability, and user experience.

- Developed dynamic UI with category-based filtering and search functionality
- Integrated **REST APIs** for live news and crypto price tracking
- Implemented **offline caching** and **automatic data refresh on network reconnection**
- Designed robust error handling with user-friendly fallback UI
- Added “Explain this news” feature for simplified content understanding
- Integrated secure user authentication using **Firebase Auth**
- Handled HTTP using the **Dio** package

Casharoo – Personal Money Management App [GitHub](#)

Built Casharoo, a Flutter-based personal money management app using **Hive (local database)** for fast offline storage. Implemented a clean and responsive UI with features to add transactions, create custom categories, and perform full **CRUD (Create, Read, Update, Delete) operations** on financial data.
