PROFILE SUMMARY

Flutter Developer with a solid foundation in mobile application development and a strong focus on building scalable, maintainable, and high-performance applications. Experienced in developing responsive user interfaces, integrating backend services, and implementing efficient application architecture. Skilled at writing clean, well-structured code and solving complex technical problems. Committed to continuous learning and delivering reliable mobile solutions in collaborative and fast-paced development environments.

TECHNICAL SKILLS

Programming Languages : Dart

Framework : Flutter

State Management : BLoC, RiverPod

Databases : Firebase Firestore, Hive (Local Storage), MongoDB (Basic)

Tools & Platforms : Git , GitHub, Visual Studio Code, Postman, Figma, GitHub Actions

API & Integration : REST API, Dio, JSON Parsing, Webhooks, Socket.IO (Basic), Cloudinary (Basic), Ngrok (Basic)

Familiar with : Python, Node js, HTML, CSS, n8n Automation, Unity Engine

Other Skills : Problem Solving , Self-Motivated Learner , Analytical Thinking , Adaptability
Curiosity for Learning New Technologies

PROJECTS

ControlX – Remote Laptop Control System

[Live Link](#) | [GitHub](#)

ControlX is a Flutter-based mobile application that enables **remote control of a laptop through a local network connection**. It communicates with a **Node.js backend** running on the target device to execute system-level commands and stream real-time system information. The application uses **Firebase Authentication** for secure authentication and is structured using **Clean Architecture** with **BLoC** for maintainability and scalability.

- Engineered a modular Flutter application using **Clean Architecture** and **BLoC** for scalable state management
- Implemented secure user authentication with **Firebase Authentication**
- Developed a **Node.js-based local server** to handle **command execution** and **system interactions**
- Designed **RESTful APIs** and integrated them using **Dio** for efficient communication
- Implemented real-time bidirectional communication using **WebSockets** (Socket.io)

- Built features to remotely trigger system operations such as application launching and system control
- Established secure device **pairing** and reliable connection handling over **LAN**

NearNow — Emergency Finder

[Live Link](#) | [GitHub](#)

NearNow is a **location-based emergency assistance** mobile application built with Flutter that helps users quickly find nearby essential services such as **hospitals, pharmacies, petrol pumps, ATMs, blood banks, and police stations**. The app is designed for urgent situations where users need fast access without searching or typing.

- Built with Flutter using **Clean Architecture** and **BLoC**
- Integrated Geolocator for live location tracking
- Used **OpenStreetMap** and Overpass API for nearby place discovery
- Added offline **caching** with **Hive**
- Implemented one-tap calling and map navigation using **url launcher**

Pulse – Real-Time Financial Market App

[Live Link](#) | [GitHub](#)

Built a real-time Flutter application that delivers live **cryptocurrency** and **global currency** market data with a strong focus on performance, reliability, and user experience.

- Developed dynamic responsive UI with market-based filtering and local search functionality
- Integrated **REST APIs** for **live cryptocurrency** and **currency exchange rate tracking**
- Implemented **offline caching** and **automatic data refresh on network reconnection**
- Designed robust error handling with user-friendly fallback UI
- Added market overview and live currency conversion features for better user engagement
- Integrated secure user authentication using **Firebase Auth**
- Handled **HTTP requests, caching, and API** optimization using the **Dio** package
- Built responsive **web deployment** and production hosting using **Firebase Hosting**

MINI PROJECT

Casharoo – Personal Money Management App

[GitHub](#)

Built Casharoo, a Flutter-based personal money management app using **Hive (local database)** for fast offline storage. Implemented a clean and responsive UI with features to add transactions, create custom categories, and perform full **CRUD (Create, Read, Update, Delete) operations** on financial data.

EDUCATION

MOBILE APP DEVELOPMENT USING FLUTTER

2025 - Present

Brototype - Exclusive Program, Remote

HIGHER SECONDARY- COMPUTER COMMERCE

2021 - 2023

Government Kattilangadi Higher Secondary School, Tanur, Malappuram

Percentage : 85% | Computer Commerce
